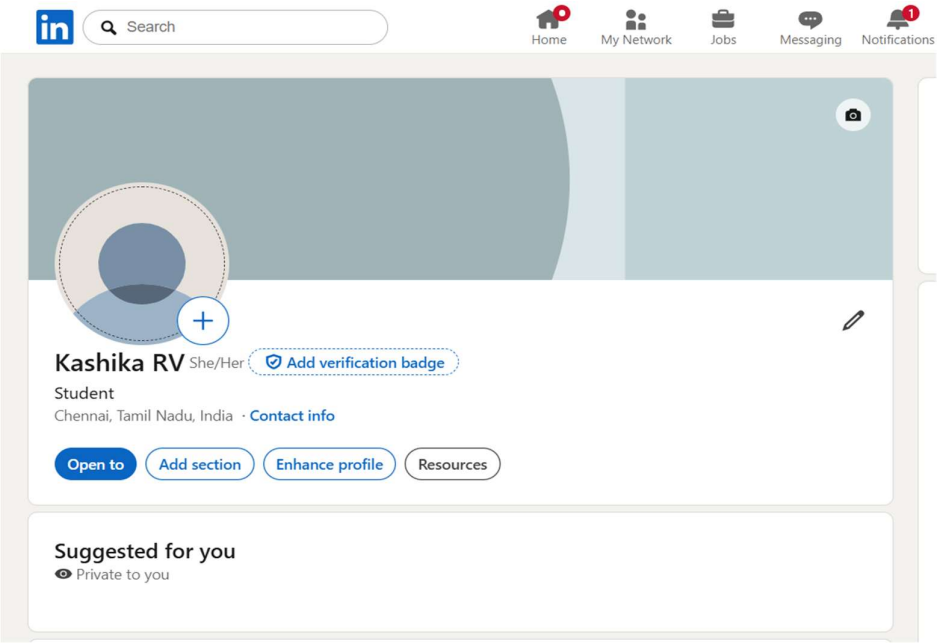
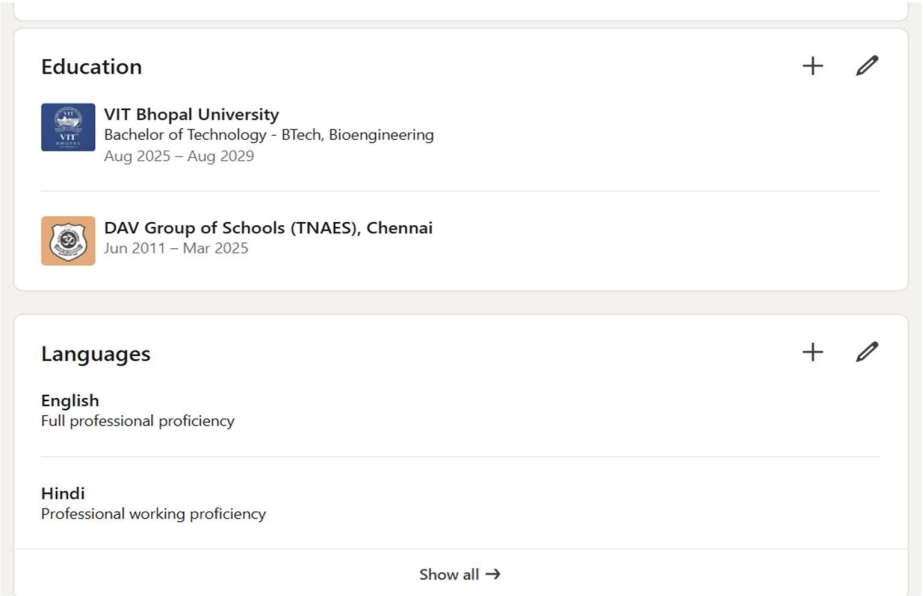
TASK 2

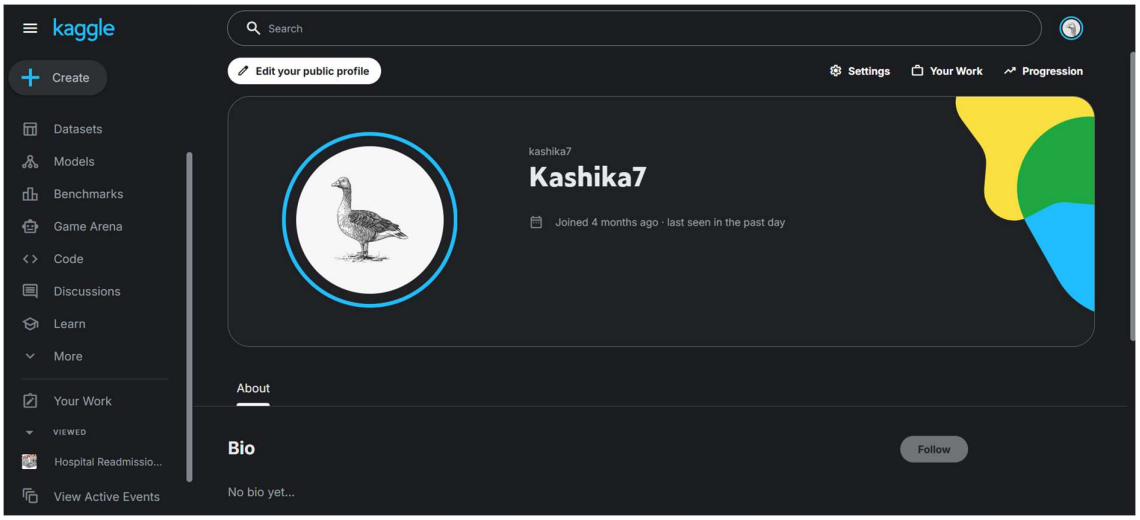
DIGITAL PORTFOLIO

LINKEDIN

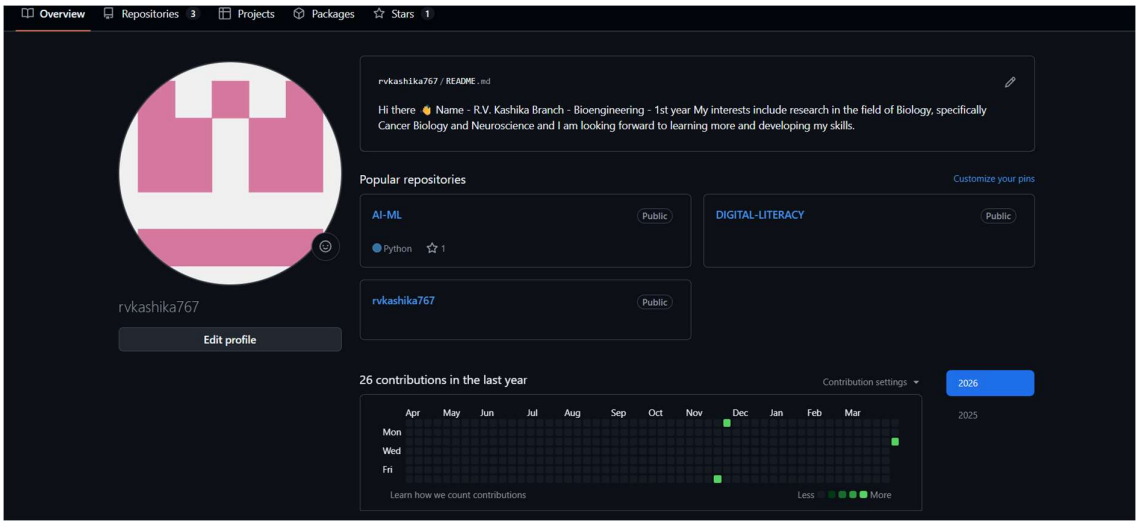




KAGGLE



GITHUB



REFLECTION NOTES

For my digital portfolio, I chose LinkedIn, Kaggle and GitHub because they're widely used in academia and in professional settings. LinkedIn is used to form a network between like-minded industry professionals, which helps in collaboration and even in getting opportunities. GitHub is a web-based platform that uses Git, an open-source version control system, to help individuals and teams store, manage, track, and collaborate on software development projects. Kaggle is primarily used for hosting data

science competitions, sharing datasets, collaborating with other professionals, and learning new AI techniques. These platforms will help in creating a strong portfolio and resume for me, which will not only help in getting better opportunities but will also allow me to grow professionally.
